Figure 1 is a timing diagram for the 186-chip spread spectrum signal. The diagram shows a 1 MSEC duration divided into segments. Segment #1 contains 11 half-chips (11 bits). Segment #186 contains 11 half-chips (11 bits). The signal is a spread spectrum signal with a bandwidth of 186 x 12 MHz. The diagram shows the signal structure for the 186-chip spread spectrum signal, including the timing of the 11 half-chips (11 bits) and the 11 half-chips (11 bits) for Segment #1 and Segment #186. The signal is a spread spectrum signal with a bandwidth of 186 x 12 MHz.
